

Maximise the Effectiveness of your Signs

with our Maintenance Service

Innovative Service Solutions

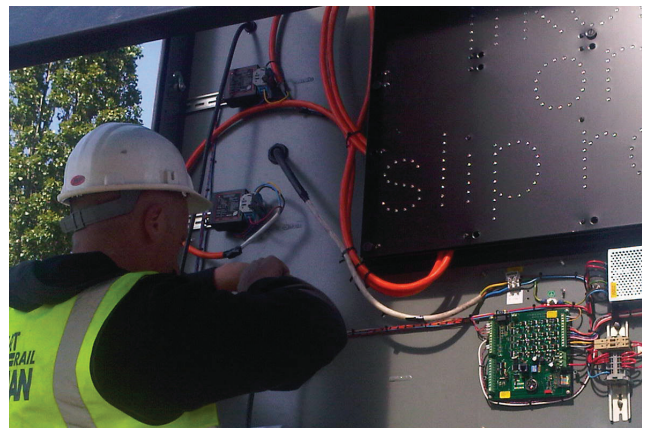

Unipart Dorman fully understand that delivering value for money through increased service life of products is vital in the current economic climate and we are committed to helping you to achieve this.

We will always meet the changing requirements of our customer base, and our latest innovations offer a range of value added solutions all specifically designed to meet these requirements. Whether it is the advantage gained from an annual maintenance inspection or the provision of a fully inclusive parts, labour and call out facility – we will tailor our service to suit your needs.

Budget constraints have been the key words recently whenever council spending is mentioned. We fully appreciate the rigours involved and our Fixed fee pricing gives planners the peace of mind that valuable road safety assets are not out of service, due to a lack of funds later in the financial year.

We understand that as the UK roads continue to get busier, safety advisory notices have to become more prominent and the need to provide a clear and consistent message is paramount in modifying driver behaviour.

The Unipart Dorman range of signs is proven to be a valuable tool in increasing road safety, and our maintenance solutions will maximise their usefulness - any non functioning signs are a wasted asset! Concerned about changing school timetables? we will upload new timetable data as part of our standard service.
